

July 19-68
 NS/B lmt Room
 CIA Position

Considerations \Rightarrow TT II - Report

Issues ~~What~~ What do do - ?

System for Targeting & Sub + Control

SR - no control for subordination of org
 + installations. Very important to CIA
 analysts (Same as ~~ST~~ TCBM)

- Strictly targeting would overload - for light use -
- Security - all-source - no provision for passing SI-TRM info for identification
- Code Utilization - how often updating - who will decide what install is identified
- Name elements - variations show up in analysis -

Wires = All-source - collection fu-in -
 Elint = Photos
 "IR-El-Photos"
 "RR-RR-El-Photos"

- Country Code - etc -

Note - DPH Wednesday

1-2-3 - too much technical data
i.e. numbers, confuse cables from field

TRP - Stable control base for ident of inst. for
attacks reporting - Also - exchange of data
files in work - receiving field reports in
formatable form.

OSS -

OBI(NIS) - BE No - burden on contributors -
little on publishers -

Where would burden fall - ? - About even - CIA - DIA.
How to handle -

Separate section or page - ? -

Archett - [redacted] - FUNSAC - much beyond absolute
minimum - get more trouble than worth
it -

COMOR Target Files - NPIC - BE system - No problem

FIB - - No big problem -

Mark -

Standardize

CH/KE people check

SR

NPIC

2-3/yr

no principle
question - problems
process

Approved For Release 2002/01/03 : CIA-RDP80B01139A000500010003-5

Warren:

Letter of Transmission.

Suggest that we junk the Para 8 in the original letter and
renumber, but use, the present Para 9.

Approved For Release 2002/01/03 : CIA-RDP80B01139A000500010003-5
